Colorimetric Determination Of Iron Answers

This Brief presents an historical investigation into the reaction between ferric ions and thiocyanate ions, which has been viewed in different ways throughout the last two centuries. Historically, the reaction was used in chemical analysis and to highlight the nature of chemical reactions, the laws of chemistry, models and theories of chemistry, chemical nomenclature, mathematics and data analysis, and instrumentation, which are important ingredients of what one might call the nature of chemistry. Using the history of the iron(III) thiocyanate reaction as a basis, the book’s main objective is to explore how chemistry develops its own knowledge base; how it assesses the reliability of that base; and how some important tools of the trade have been brought to bear on a chemical reaction to achieve understanding, a worthwhile goal of any historical investigation.

Includes monthly "Abstracts of recent literature relating to non-ferrous and ferrous metals."

Managing Editor Mary A.H. Franson.

Due to its simple language, straightforward approach to explaining concepts, and the right kind of examples, this book has established itself as student’s companion in almost all leading universities in India. With its authentic text and a large number of questions taken from various university examinations, coupled with regular revisions, the book has served well for more than 20 years now. In the attempt to keep the book aligned with various syllabuses and to reach out to students of more and more universities, more details have been included for the fourth edition, which has been completely recast and reformatted. The book is meant for the first year engineering degree courses of Indian universities.

STRENGTH OF THE BOOK
• Numerous solved problems
• Large number of questions from various universities for exhaustive practice

NEW IN THE FOURTH EDITION
• Completely recast and reformatted text
• New topics like: Cooling curves for one- and two-component eutectics; Electrode polarization and overvoltage; Decomposition potential; Solar cells; Pitting corrosion; Metallurgy and medicine; Reverse osmosis; Bioengineering.

Includes list of members, 1882-1902 and proceedings of the annual meetings and various supplements.
